

Backup DB Release Notes

v1.3 build 4

1. **Upgrade:** The zip compression components have been updated to the latest version. This will provide better support for databases over 4 GB and improve performance when extracting and compressing databases.

v1.3 build 3

1. **Problem:** Backup DB fails to create database user login on SQL Server 2005.
Status: This problem is resolved.

v1.3 build 2

1. **Modification:** Changed the Upload button to show the “Upload to VEMAX” dialog for uploading files to the new FTP server.

v1.3 build 1

1. **Enhancement:** Backup DB now supports Windows Server 2008.

v1.2 build 0

1. **Upgrade:** DevExpress controls have been updated to the latest version.

v1.2 build 1

1. **Problem:** The Backup DB application loads slowly when the Server Name and System DB Name in Vemax.GlobalInfo.dat file are not set correctly.
Status: This problem has been resolved.

v1.2 build 0

1. **Upgrade:** DevExpress controls have been updated to the latest version.
2. **Upgrade:** Updated to .Net Framework 2.
3. **Problem:** If the size of the database being backed up is greater than 2GB the file will not back up properly.
Status: This problem has been resolved.

v1.1 build 1

1. **Problem:** An error message “/Support: The system cannot find the file specified” occurs when the user selects the Auto Upload feature.
Solution: This problem is corrected.

v1.1 build 0

1. **Upgrade:** DevExpress controls have been upgraded to the latest version.
2. **Modification:** Changed to store the settings by Server Name.

3. **New Feature:** Added support for MS SQL Server 2005.

v1.0 build 17

1. **Upgrade:** DevExpress controls have been upgraded to the latest version.

v1.0 build 16

1. **Problem:** The feature to auto-create the database was not naming the physical database properly.
Solution: This problem is corrected.

v1.0 build 15

1. **New Feature:** If any user is connecting to the database when trying to restore a database to the server, it will show a grid with the connections' information.
2. **New Feature:** When trying to restore a database that does not exist on the server, the application will create the database first, and then restore it from the backup file.
3. **New Feature:** The restore operation supports .vmxbak files now.

v1.0 build 12

1. **New Feature:** After the backup, the log file will be automatically shrunk to the minimum size.
